

Please join us for KDD-95, August 20-21, 1995

The First International Conference on Knowledge Discovery and Data Mining

With the advances in data acquisition and storage technologies, the problem of how to turn raw data into useful information becomes a significant one. Having reached sizes that defy even partial examination by humans, modern databases and collections of data sets are literally swamping users. This data firehose phenomenon appears in many fields including science data analysis, medical and healthcare, corporate and marketing, and financial markets. Knowledge discovery in databases (KDD) and data mining are areas of common interest to researchers in machine learning, machine discovery, statistics, intelligent databases, knowledge acquisition, data visualization, high performance computing, and expert systems. This conference will continue in the tradition of the 1989, 1991, 1993, and 1994 KDD workshops by bringing together researchers and application developers from different areas, and focusing on unifying themes such as the use of domain knowledge, managing uncertainty, interactive (human-oriented) presentation, and applications. The KDD conference also includes invited talks, a demo and poster session, and panel discussions. The KDD Conference will be held in Montréal, Québec, August 20-21, 1995. The conference is collocated with IJCAI-95.
