Special Track on

Artificial Intelligence Education

The FLAIRS Artificial Intelligence Education special track is devoted to methods of teaching AI. Its purpose is to provide a forum where AI educators from diverse institutional settings can share resources, innovations, and insights to advance the quality of AI education worldwide. Topics include model assignments, course syllabi, software, or other curricular resources, implementation of the Computing Curricula 2001 Intelligent Systems area, AI classroom techniques or innovations for undergraduate or graduate instruction, intelligent applications for instruction of AI and assessment of such applications, the use of robots or other hands-on equipment for teaching AI, strategies for incorporating AI research into AI courses, strategies for encouraging wider student interest and participation in AI, and descriptions or case studies of successful class projects or other pedagogical experiences.
